R30 000 single premium, R500 monthly by debit order

Income distribution

Declared on the last working day of March and September, paid within six weeks of declaration date

Benchmark

Global - Multi Asset - High Equity - ASISA Category Average

Portfolio objective

The investment objective of the portfolio is to generate capital appreciation over the medium to long term. This is a feeder fund, and feeds into the Strategic Global Balanced Fund, which is characterised as being of a multi-asset class nature.

Investment policy summary

The portfolio will, apart from assets in liquid form, consist solely of participatory interests in the above-mentioned underlying portfolio and financial instruments for the exclusive purpose of hedging exchange rate risks. The underlying portfolio invests in a mix of collective investment portfolios. The Strategic Global Balanced Fund is suitable for investors who want to maximise capital growth over the medium to long term (five to seven years). It is aimed at investors who have a relatively low aversion to risk and would like exposure to equity markets. The portfolio's relatively high weighting to equities is designed to increase the possibility of returns above inflation in the medium to long term (five to seven years). The manager will be permitted to invest, at its discretion, on behalf of the portfolio, in offshore investments, as legislation permits. There are no additional mandate investment limitations.

Income distribution (cent per unit)

Date	Interest	Dividend
September 2025	0.0000	0.0000
March 2025	0.0200	0.0000

Disclosures

- Total expense ratio (TER):** The percentage of the value of the portfolio that was incurred as expenses relating to the administration (charges, levies and fees) of the portfolio. TER is calculated over a rolling three-year period (or since inception, where applicable) and annualised to the most recent calendar quarter. A higher TER does not necessarily imply a good return. The current TER may not necessarily be an accurate indication of future TERs.
- Transaction costs (TC):** The percentage of the value of the portfolio that was incurred as costs relating to the buying and selling of the assets underlying the portfolio. Transaction costs are a necessary cost in administering the portfolio and impacts portfolio returns. It should not be considered in isolation, as returns may be impacted by many other factors over time, including market returns, the type of financial product, the investment decisions of the investment manager and the TER. Calculations are based on actual data where possible and best estimates where actual data is not available.
- Total investment charge (TIC):** The percentage of the portfolio that was incurred as costs relating to the investment of the portfolio. It is the sum of the TER and TC.

Inception date note

*The portfolio inception date is 12 December 2013.

Risks (portfolio specific)

Derivatives: There is no assurance that a portfolio's use of a derivative strategy will succeed. A portfolio's management may employ a sophisticated risk management process, to oversee and manage derivative exposures within a portfolio, but the use of derivative instruments may involve risks different from, and, in certain cases, greater than, the risks presented by the securities from which they are derived.

Exposure to foreign securities: Foreign securities within portfolios may have additional material risks, depending on the specific risks affecting that country, such as: potential constraints on liquidity and the repatriation of funds; macroeconomic risks; political risks; foreign exchange risks; tax risks; settlement risks; and potential limitations on the availability of market information. Fluctuations or movements in exchange rates may cause the value of underlying international investments to go up or down. Investors are reminded that an investment in a currency other than their own may expose them to a foreign exchange risk.

Feeder funds: A feeder fund is a portfolio that invests in a single portfolio of a collective investment scheme, which levies its own charges and which could result in a higher fee structure for the feeder fund.

Drawdown: The potential magnitude of loss - the largest peak-to-trough decline in returns over the period, also known as the maximum drawdown.

Liquidity: The risk that a given security or asset cannot be traded quickly enough in the market to prevent a loss (or make the required profit).

Equities: The value of equities may vary according to company profits and future prospects, as well as more general market factors. In the event of a company default, the owners of their equity rank last in terms of any financial payment from that company.

Bonds: The value of fixed income investments (e.g. bonds) tends to decrease when interest rates and/or inflation rises. Bonds issued by major governments and companies, will be more stable than those issued by emerging markets or smaller corporate issuers. If an issuer experiences financial difficulty, there may be a risk to some, or all, of the capital invested. Any historical or current yields quoted should not be considered reliable indicators of future performance.

For a detailed description of these risks, and other risks that are relevant to the portfolio, please refer to the CIS Risk Disclosure Document, available on the website [Risk Disclosure](#)

General

Collective Investment Schemes (unit trusts) are generally medium to long-term investments. The value of participatory interests (units) or the investment may go down as well as up. Past performance is not necessarily a guide to future performance. Collective investment schemes are traded at ruling prices and can engage in borrowing and scrip lending (i.e. borrowing and lending of assets). The manager does not provide any guarantee, either with respect to the capital or the return of a portfolio. Different classes of participatory interests apply to these portfolios and are subject to different fees and charges. A schedule of all fees and charges, inclusive of VAT and maximum commissions, is available on request from us or from your financial adviser. Forward pricing is used. Any forecast and/or commentary in this document are not guaranteed to occur.

Redemptions

The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. The ability of the portfolio to repurchase, is dependent upon the liquidity of the securities and cash of the portfolio. A manager may suspend repurchases for a period, subject to regulatory approval, to await liquidity, and the manager must keep the investors informed about these circumstances.

Yields

The yield for bond and income portfolios is historic and is calculated quarterly.

Prices

The latest prices and TER are published daily in the Business Report (South Africa's National Financial Daily) and are made available on our website [daily-unit-prices](#)

Performance fees

Performance fees are not levied on the portfolio.

Performance returns

Lump-sum performance returns are being quoted. Income distributions, prior to deduction of applicable taxes, are included in the performance calculations. NAV to NAV figures have been used for the performance calculations, as calculated by the Manager at the valuation point defined in the deed, over all reporting periods. Investment performance calculations are available for verification upon request by any person. Reinvestment of income is calculated on the actual amount distributed per participatory interest, using the ex-dividend date NAV price of the applicable class of the portfolio, irrespective of the actual reinvestment date. The performance is calculated for the fee class. The individual investor performance may differ, as a result of initial fees, the actual investment date, the date of reinvestment and dividend withholding tax. The rate of return is calculated on a total return basis, and the following elements may involve a reduction of the investor's capital: interest rates, economic outlook, inflation, deflation, economic and political shocks or changes in economic policy. Annualised returns are period returns re-scaled to a period of one year. This allows investors to compare returns of different assets that they have owned for different lengths of time. All period returns greater than one year have been annualised. Returns for periods less than one year have not been annualised. A cumulative return is the aggregate amount an investment has gained or lost over time, independent of the period of time involved. Actual annual figures are available to the investor on request.

Valuations and transaction cut-off times

The portfolio is valued daily, at the end of the day (18:00). The withdrawal instruction must be received before 13:00 on the pricing date, failing which, the next pricing date will apply.

Additional information

For additional information on the portfolio, refer to the following documents, available on our website [www.alexforbes.com](#) from your financial adviser, or on request from the manager, free of charge.
