

IS Cautious Model

Fund Fact Sheet

Discretionary Fund Manager

January 2026

Launch date

March 2024

Fund description

Multi asset class - Regulation 28 compliant

Portfolio description

The IS Cautious Model Portfolio is designed to protect capital over the short to medium term, while aiming for reasonable investment growth over the long run. It caters specifically to very cautious investors seeking income over an extended period. The portfolio has a moderate to low risk profile, with an emphasis on capital preservation. The portfolio follows a building block approach, investing in a diversified mix of assets. The maximum allocation to equities is capped at 40%, balancing growth potential with risk. The allocation to fixed income within the portfolio aims to provide stability, with bonds and cash offering income and liquidity for investors. The portfolio complies with Regulation 28 requirements for retirement funds with an additional allowance to offshore assets up to 45%.

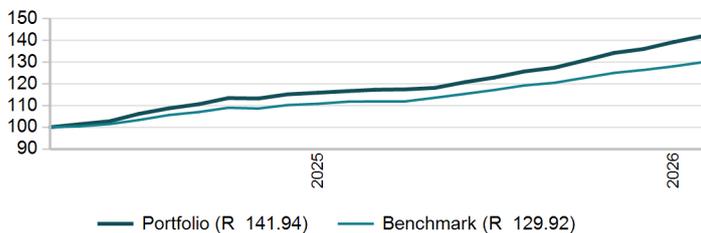

Risk profile

Capital
Probability of a capital loss or negative return in any 12-month period

Inflation
Long-term expected return ahead of inflation

Range
Expected range of returns around the benchmark in any 12-month period

Value of R100 invested since inception

Notes

1. Total Expense Ratio (TER): The percentage of the value of the portfolio that was incurred as expenses relating to the administration (charges, levies and fees) of the portfolio. TER is calculated over a rolling three year period (or since inception where applicable) and annualised to the most recently completed month. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TERs. Transaction cost (TC): The percentage of the value of the portfolio that was incurred as costs relating to the buying and selling of the assets underlying the portfolio. Transaction costs are a necessary cost in administering the Fund and impacts returns. It should not be considered in isolation as returns may be impacted by many other factors over time, including market returns, the type of financial product, the investment decisions of the investment manager and the TER. Calculations are based on actual data where possible and best estimates where actual data is not available. Total investment charge (TIC): This percentage of the portfolio was incurred as costs relating to the investment of the portfolio. It is the sum of the TER and TC.
2. Market data is sourced from Datastream.
